

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## SUGGESTIONS TO TEACHERS

**SUGGESTIONS FOR USING THE DIALOGUES AND THE PICTURES.** Two children may be selected to impersonate Kate and Frank, and the dialogue may be read in the usual way. Have the remaining children follow the reading and decide if the answers are correctly given. Children enjoy this, and several different pairs of children may be selected to repeat the reading. In the second and subsequent readings, different numbers may be used so that the children will be kept on the alert. Or, the girls of the class may represent Kate and the boys Frank, giving the answer called for when all are ready. Another way is to disregard the dialogue form, and have the sentences or paragraphs read in turn, all paying strict attention in order to note if correct answers are supplied in the elliptical sentences. Supplement the lessons given by frequent use of measures suggested.

Have the pictures carefully studied. Many of them are suitable for oral language lessons. Indeed, the entire book, if wisely used, will be of great assistance in reading and language, as well as in arithmetic.

Page 9. Teach the following signs:

+ is read *and* or *plus*.

= is read *are*.

? is read *how many* or *what*.

- is read *less*.

Page 10. Teach that 1 nickel equals 5 c.

Page 14. Show by actual measurement that 2 pt. equal 1 qt. and 1 pt. equals  $\frac{1}{2}$  qt. Teach the abbreviation pt. for pint or pints, and qt. for quart or quarts. Teach the symbol  $\frac{1}{2}$ .

Page 17. Teach that the sign  $\times$  is read *times*.

Page 18. Show by measurement that 1 yard equals 3 feet, 1 foot equals  $\frac{1}{3}$  yard, and 2 feet equal  $\frac{2}{3}$  yard. Teach the abbreviation ft. for foot or feet, and yd. for yard or yards. Teach the symbols  $\frac{1}{3}$  and  $\frac{2}{3}$ .

Page 23. Teach that the sign  $\div$  is read *divided by*.

Page 34. Show by measures that 1 bushel equals 4 pecks. Show parts of a bushel. Teach the abbreviation bu. for bushel or bushels, and pk. for peck or pecks. Teach the symbols  $\frac{1}{4}$ ,  $\frac{2}{4}$ ,  $\frac{3}{4}$ .

## SUGGESTIONS TO TEACHERS

Page 40. Show by measures that 1 gallon equals 4 quarts. Show parts of a gallon. Teach the abbreviation gal. for gallon or gallons, and qt. for quart or quarts.

Page 43. Columns in addition should be added either up or down rapidly. Use similar pages for both oral and written work.

Page 44. Teach the abbreviation hr. for hour or hours, and da. for day or days.

Page 47. Teach the symbols  $\frac{1}{100}$ ,  $\frac{1}{1000}$ , etc., and the abbreviation c. for cents or cent.

Page 51. Teach the symbols  $\frac{1}{7}$ ,  $\frac{2}{7}$ , etc. Teach the abbreviation wk. for week or weeks.

Page 52. Teach that the term *units* is the same as *ones*.

Page 57. Teach the abbreviation mo. for month or months.

Page 62. Teach that 12 things make 1 dozen.

Page 68. Show by measures that 1 peck equals 8 quarts. Teach the symbols  $\frac{1}{8}$ ,  $\frac{3}{8}$ , etc.

Page 72. Show by measures that 1 gallon equals 8 pints.

Page 74. Show by use of scales that 1 pound equals 16 ounces. Teach the abbreviation lb. for pound or pounds, oz. for ounce or ounces.

Page 82. Illustrate by drawings on the board to show size of flower beds. Draw a square yard and divide it into square feet.

Page 83. Teach the abbreviation sq. ft. for square foot or square feet, and sq. yd. for square yard or square yards. Teach the symbols  $\frac{1}{9}$ ,  $\frac{2}{9}$ , etc.

Page 99. Teach the symbol  $\frac{1}{10}$ .

Page 106. Show by measurement that 1 foot equals 12 inches. Teach the abbreviation in. for inch or inches. Teach the symbols  $\frac{1}{12}$ ,  $\frac{1}{6}$ , etc.

Page 129. Teach the carrying process in addition.

Page 131. Teach the borrowing process in subtraction.

## NUMBERS THROUGH 10

KATE. Speckle has some little chickens. Let us count them.

FRANK. I can not count them. They run about so fast.

KATE. You must count fast, then. One—two—three—four—five—six—seven—eight—nine—ten. She has ten little chicks.

FRANK. There are three black ones and all the others are white.

KATE. There are — white ones.

FRANK. Four little chicks stay close to the mother.  
— chicks run away from her.

## NUMBERS THROUGH 10

5 chicks and 3 chicks are — chicks.

$$5 + 3 =$$

6 frogs and 2 frogs are — frogs.

$$6 + 2 =$$

4 birds and 4 birds are — birds.

$$4 + 4 =$$

7 bears and 1 bear are — bears.

$$7 + 1 =$$

5 dolls and 2 dolls are — dolls.

$$5 + 2 =$$

## NUMBERS THROUGH 10

Here are some number stories:

Four chicks were under a big leaf. It began to rain. Three more chicks ran under the leaf. How many chicks were under the leaf then?  $4 + 3 =$

The sun came out again. Speckle called the chicks: "Cluck, cluck!" Six chicks ran to her. How many chicks stayed under the big leaf?  $7 - 6 =$

Eight chicks were in the yard. Two chicks saw a hole in the fence and went through it. How many chicks were left in the yard?  $8 - 2 =$

[ 8 ]

## NUMBERS THROUGH 10

5 chicks + 5 chicks = ? chicks.

4 chicks + ? chicks = 10 chicks.

3 chicks + ? chicks = 10 chicks.

10 chicks - 4 chicks = ? chicks.

8 chicks - 5 chicks = ? chicks.

Here is a number story that Kate made for Frank about 10 - 2:

Speckle had 10 little chicks. 2 ran away. How many little chicks stayed close to their mother?

Here is a number story that Frank made for Kate about 5 + 5:

5 little chicks are drinking water and 5 little chicks are eating meal. How many little chicks are there in all?

Here is a number story about 6 + 4:

Speckle has 6 black chicks and 4 white chicks. How many chicks has she?

## NUMBERS THROUGH 11

FRANK. How much money have you, Kate?

KATE. I have one nickel and six cents. That makes — cents. How much have you?

FRANK. I have one nickel and four cents. That makes — cents.

KATE. I have — cents more than you have. I will give you one cent. Then you will have — cents and I will have — cents.

FRANK. I am going to spend three cents for an orange. Ten cents less three cents are — cents.

KATE. I will spend five cents for candy. Ten cents less five cents are — cents.

[ 10 ]

# NUMBERS THROUGH 11

Make number stories about:

6 cents + 5 cents

11 cents – 2 cents

4 apples + 5 apples

11 oranges – 4 oranges

8 bananas + 3 bananas

11 plums – 6 plums

6 dolls + 4 dolls

11 tops – 8 tops

Read and give answers:

$$10 - 5 =$$

$$11 - 3 =$$

$$10 - 4 =$$

$$11 - 5 =$$

$$10 - 3 =$$

$$11 - 7 =$$

$$10 - 7 =$$

$$11 - 9 =$$

$$10 - 8 =$$

$$11 - 8 =$$

$$10 - 6 =$$

$$11 - 4 =$$

$$10 - 2 =$$

$$11 - 6 =$$

$$10 - 9 =$$

$$11 - 2 =$$

Add:

6	7	9	8	6	7	4
<u>5</u>	<u>3</u>	<u>2</u>	<u>2</u>	<u>4</u>	<u>4</u>	<u>3</u>
5	5	3	3	4	4	3
<u>4</u>	<u>6</u>	<u>7</u>	<u>8</u>	<u>7</u>	<u>6</u>	<u>6</u>

[ 11 ]

## NUMBERS THROUGH 12

- 1 nickel + 2 cents are — cents.  
2 nickels + 2 cents are — cents.  
1 nickel + 3 cents are — cents.  
1 nickel + 6 cents are — cents.  
1 nickel + 7 cents are — cents.  
1 nickel + 4 cents are — cents.  
2 nickels - 4 cents are — cents.  
2 nickels - 8 cents are — cents.  
12 cents - 1 nickel are — cents.  
12 cents - 2 nickels are — cents.

### NUMBER STORIES

Frank had 12 cents. He spent 2 cents for a top and 3 cents for a little flag. He had — cents left.

Kate had 11 cents. She spent 5 cents for a doll's hat and 2 cents for candy. She had — cents left.

# NUMBERS THROUGH 12

$6 + 5 =$	$4 + 5 =$	$7 + 4 =$
$6 + 4 =$	$4 + 7 =$	$7 + 3 =$
$6 + 2 =$	$4 + 8 =$	$7 + 5 =$
$6 + 3 =$	$4 + 6 =$	$9 + 3 =$
$6 + 6 =$	$4 + 4 =$	$9 + 2 =$
$5 + 4 =$	$4 + 3 =$	$8 + 3 =$

$12 - 2 =$	$12 - 11 =$	$11 - 9 =$
$12 - 3 =$	$12 - 8 =$	$11 - 3 =$

Subtract:

$\begin{array}{r} 9 \\ \underline{5} \end{array}$	$\begin{array}{r} 8 \\ \underline{6} \end{array}$	$\begin{array}{r} 5 \\ \underline{3} \end{array}$	$\begin{array}{r} 6 \\ \underline{2} \end{array}$	$\begin{array}{r} 7 \\ \underline{4} \end{array}$	$\begin{array}{r} 9 \\ \underline{6} \end{array}$	$\begin{array}{r} 9 \\ \underline{8} \end{array}$
$\begin{array}{r} 11 \\ \underline{9} \end{array}$	$\begin{array}{r} 10 \\ \underline{8} \end{array}$	$\begin{array}{r} 12 \\ \underline{4} \end{array}$	$\begin{array}{r} 11 \\ \underline{3} \end{array}$	$\begin{array}{r} 12 \\ \underline{5} \end{array}$	$\begin{array}{r} 10 \\ \underline{6} \end{array}$	$\begin{array}{r} 12 \\ \underline{7} \end{array}$

## NUMBERS THROUGH 12 — HALVES

FRANK. See the measures that Uncle Will left here.

KATE. This measure holds one quart of water.

FRANK. This measure holds just one half as much.  
It holds one pint. In one quart there are —  
pints.

KATE. I will put one quart of water into this pail.  
Now there are two pints in it.

FRANK. I will put one half quart into it. Now  
there are — pints of water in the pail. That  
makes a whole quart and half a quart.

KATE. Now there are — quarts of water in the  
pail.

FRANK. Let us fill the pail half full.

## NUMBERS THROUGH 12 — HALVES

KATE. There are now six pints of water in it and it is half full.

FRANK. There are — quarts in the pail.

KATE. If I put in six pints more there will be — pints.

FRANK. There will be — quarts of water in the pail when it is full.

12 pints less 6 pints are — pints.

6 pints and 6 pints are — pints.

$\frac{1}{2}$  of 12 pints is — pints.

$\frac{1}{2}$  of 10 pints is — pints.

$\frac{1}{2}$  of 8 pints is — pints.

$\frac{1}{2}$  of 6 pints is — pints.

$\frac{1}{2}$  of 4 pints is — pints.

$\frac{1}{2}$  qt. = ? pt.

2 pt. = ? qt.

$1\frac{1}{2}$  qt. = ? pt.

4 pt. = ? qt.

3 qt. = ? pt.

7 pt. = ? qt.

$4\frac{1}{2}$  qt. = ? pt.

9 pt. = ? qt.

$5\frac{1}{2}$  qt. = ? pt.

10 pt. = ? qt.

6 qt. = ? pt.

6 pt. = ? qt.

## NUMBERS THROUGH 13

Here are some number stories about Kate and Frank:

Kate bought a dozen oranges. She gave away  $\frac{1}{2}$  of them. She had — oranges left.

Frank had 8 pencils. He lost  $\frac{1}{2}$  of them. He lost — pencils.

Frank had a dime. He spent  $\frac{1}{2}$  of it for candy. He had — cents left.

There were 6 cups on the table. Kate took away  $\frac{1}{2}$  of them. She took away — cups.

Kate had a ribbon 4 yards long. She cut off  $\frac{1}{2}$  of it. She cut off — yards.

Frank had 12 marbles. He gave Kate  $\frac{1}{2}$  of them. He kept — marbles.

# NUMBERS THROUGH 13

Frank and Kate picked  $6\frac{1}{2}$  quarts of berries.  
They picked — pints of berries.

Frank had 7 dollars and Kate had 6 dollars.  
Together they had — dollars.

Kate drank a pint of milk each day. In 6 days  
she drank — quarts of milk.

$$6 + ? = 13$$

$$7 + ? = 13$$

$$13 - 7 =$$

$$5 + ? = 13$$

$$9 + ? = 13$$

$$13 - 9 =$$

$$4 + ? = 13$$

$$8 + ? = 13$$

$$13 - 3 =$$

2 ones are —

$$2 \times 1 =$$

3 ones are —

$$3 \times 1 =$$

2 twos are —

$$2 \times 2 =$$

3 twos are —

$$3 \times 2 =$$

2 threes are —

$$2 \times 3 =$$

3 threes are —

$$3 \times 3 =$$

2 fours are —

$$2 \times 4 =$$

3 fours are —

$$3 \times 4 =$$

2 fives are —

$$2 \times 5 =$$

4 ones are —

$$4 \times 1 =$$

2 sixes are —

$$2 \times 6 =$$

4 twos are —

$$4 \times 2 =$$

## NUMBERS THROUGH 13 — THIRDS

KATE. I want to buy a new hair-ribbon. One yard will be enough, I think.

FRANK. Let me measure it with this foot measure.  
It is just three feet long. In a yard there are  
— feet.

KATE. Then one foot is one third of a yard.

FRANK. Yes, and two thirds of a yard are —  
feet.

KATE. In one yard there are — thirds of a yard.

FRANK. If the ribbon were two yards long it would  
be — feet long.

KATE. If the ribbon were two and one third yards  
long it would be — feet long.

# NUMBERS THROUGH 14

Draw a line 1 yard long.

Draw a line  $\frac{1}{8}$  yard long.

Draw a line  $\frac{2}{8}$  yard long.

Draw a line 2 yards long.

Draw a line  $2\frac{2}{8}$  yards long.

$$\frac{1}{8} \text{ yd.} = ? \text{ ft.}$$

$$2 \text{ ft.} = ? \text{ yd.}$$

$$\frac{2}{8} \text{ yd.} = ? \text{ ft.}$$

$$1 \text{ ft.} = ? \text{ yd.}$$

$$1 \text{ yd.} = ? \text{ ft.}$$

$$12 \text{ ft.} = ? \text{ yd.}$$

$$2 \text{ yd.} = ? \text{ ft.}$$

$$6 \text{ ft.} = ? \text{ yd.}$$

$$3 \text{ yd.} = ? \text{ ft.}$$

$$3 \text{ ft.} = ? \text{ yd.}$$

$$4 \text{ yd.} = ? \text{ ft.}$$

$$9 \text{ ft.} = ? \text{ yd.}$$

Add:

4	5	4	7	6	4	5

2	3	5	2	4	3	4
4	3	3	5	3	3	3
3	2	2	2	2	1	4
2	2	2	2	2	3	2
<u>2</u>	<u>3</u>	<u>2</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>1</u>

## NUMBERS THROUGH 14 — THIRDS

FRANK. Look at my new kite. See what a long tail it has.

KATE. How long do you think the tail is?

FRANK. Let us measure it. Three feet and three feet and one foot are — feet. It is — feet long.

KATE. Let us measure it in yards. One yard and one yard and one third of a yard are — yards. It is — yards long.

FRANK. I don't think that is long enough. I am going to make it two feet longer. It is now — feet long.

KATE. I think that nine feet is too long. Let us cut off one third of it.

## NUMBERS THROUGH 14

FRANK. I will divide it into three equal parts.  
Three feet and three feet and three feet are  
nine feet.

KATE. One third of it will be — feet. Now I  
have cut it off.

FRANK. Two thirds are left. The tail of my kite  
is — feet long.

$\frac{1}{3}$  of 9 feet is — feet.

$\frac{2}{3}$  of 9 feet are — feet.

$\frac{1}{3}$  of 6 feet is — feet.

$\frac{2}{3}$  of 6 feet are — feet.

$\frac{1}{3}$  of 12 feet is — feet.

$\frac{2}{3}$  of 12 feet are — feet.

$$6 + ? = 13$$

$$10 + ? = 14$$

$$14 - 2 =$$

$$5 + ? = 13$$

$$8 + ? = 14$$

$$14 - 10 =$$

$$4 + ? = 13$$

$$6 + ? = 14$$

$$14 - 8 =$$

$$3 + ? = 13$$

$$3 + ? = 14$$

$$14 - 6 =$$

$$7 + ? = 13$$

$$7 + ? = 14$$

$$14 - 7 =$$

$$9 + ? = 13$$

$$9 + ? = 14$$

$$14 - 5 =$$

$$8 + ? = 13$$

$$5 + ? = 14$$

$$14 - 9 =$$

## NUMBERS THROUGH 15

## NUMBERS THROUGH 17

KATE. Let us play school. I will be the teacher.

FRANK. All right. Give me some hard questions.

KATE. Here is a hard one. 14 pints are how many quarts?

FRANK. 14 pints are — quarts.

KATE. 17 pints are how many quarts?

FRANK. That is too hard. I do not know.

KATE. I do not think that is hard. 16 pints are how many quarts?

FRANK. 16 pints are — quarts.

KATE. Now, 17 pints are how many quarts?

[ 28 ]

## NUMBERS THROUGH 17

FRANK. 17 pints are — quarts. It is easy now.

KATE. 2 yards are how many feet?

FRANK. 2 yards are — feet.

KATE. 5 yards are how many feet?

FRANK. 5 yards are — feet.

KATE. 16 feet are how many yards?

FRANK. 16 feet are — yards.

KATE. 17 feet are how many yards?

FRANK. 17 feet are — yards.

KATE. You are a good pupil. Now let us go outdoors and play.

$$17 - 3 = \quad 17 - 7 = \quad 16 - 7 =$$

$$17 - 10 = \quad 17 - 6 = \quad 16 - 5 =$$

$$17 - 8 = \quad 17 - 9 = \quad 16 - 8 =$$

$$17 - 5 = \quad 16 - 9 = \quad 16 - 10 =$$

Make number stories about:

17 birds    - 10 birds        17 frogs    - 9 frogs

16 roses    - 4 roses        16 marbles - 8 marbles

6 sheep    + 8 sheep        9 chicks    + 8 chicks

12 rabbits + 4 rabbits    10 plums    + 5 plums

## NUMBERS THROUGH 18

$$2 \text{ qt.} = ? \text{ pt.} \qquad 1 \text{ yd.} = ? \text{ ft.}$$

$$8 \text{ qt.} = ? \text{ pt.} \qquad 5 \text{ yd.} = ? \text{ ft.}$$

**FRANK.** Jack Frost came last night and the ground is covered with nuts. Let us get all we can and sell them.

**KATE.** We can fill these peck measures and then put the nuts into the bushel basket. It will take four pecks to fill it.

**FRANK.** Now I have one peck of nuts. The bushel basket is one fourth full.

**KATE.** I will put my peck into the basket. It is now half full. In one half bushel there are — fourths of a bushel.

## NUMBERS THROUGH 20 — FOURTHS

FRANK. I have put in another peck of nuts. Now the basket is three fourths full. Three fourths of a bushel are — pecks.

KATE. I have another peck; now the basket is full. In one bushel there are — pecks. Let us put the nuts into a sack and fill the basket again.

FRANK. Here is another peck. One bushel and one peck are — pecks.

KATE. Now I will put my peck in. One bushel and two pecks are — bushels.

FRANK. We shall soon have the basket full again. Two bushels of nuts are — pecks.

KATE. If we get three bushels of nuts that will be — pecks.

FRANK. I hope we can get four bushels. That will be — pecks of nuts.

## NUMBERS THROUGH 22

### NUMBER STORIES

Kate bought a piece of ribbon  $7\frac{1}{8}$  yards long. She cut off 2 yards. — yards were left in the piece.

Kate's father bought a barrel of apples that held  $2\frac{1}{2}$  bushels. He bought — pecks of apples.

If a quart of milk costs 8 cents,  $2\frac{1}{2}$  quarts will cost — cents.

Kate paid  $2\frac{1}{2}$  dollars for a pair of shoes and  $3\frac{1}{2}$  dollars for a hat. She spent — dollars.

Frank can walk 4 miles in an hour. In  $2\frac{1}{2}$  hours he can walk — miles.

Kate bought grapes at 8 cents a pound. For 20 cents she received — pounds of grapes.

Frank bought 11 apples at 2 cents each. He paid — cents.

Kate and Frank gathered 4 bushels of nuts. They sold  $1\frac{1}{2}$  bushels. They had — bushels left.

Frank can ride 8 miles in an hour on his wheel. How long will it take him to go 20 miles?

## NUMBERS THROUGH 24

2 quarts are — pints.

4 quarts are — pints.

10 quarts are — pints.

21 pints are — quarts.

## NUMBERS THROUGH 24 — FOURTHS

FRANK. Uncle Will has been milking old Bess.  
Here he comes with the milk.

KATE. I wonder how much he got today. Let us  
see you measure the milk, please, Uncle Will.

UNCLE WILL. Yes, you may stand here by the table.  
This is a gallon measure. It takes four quarts  
of milk to fill it. The measure is half full now.  
Do you know how many quarts that is?

FRANK. I know! It is — quarts.

KATE. If you put in — quarts more it will be  
full.

## NUMBERS THROUGH 24

UNCLE WILL. That is right. I will pour the gallon of milk into the jar and fill it again. Now the gallon measure is one fourth full. How many quarts is that?

KATE. That is just — quart.

UNCLE WILL. Here is another quart. Now the gallon measure is two fourths full.

FRANK. That is — quarts. Two fourths of a gallon is the same as — of a gallon.

UNCLE WILL. I will put in another quart. Now the gallon measure is three fourths full.

KATE. There are — quarts of milk in it. One quart more and it will be full.

UNCLE WILL. It is full now. I will pour it into the jar. There are — quarts of milk in the jar now.

FRANK. Old Bess is a good cow. She gave — gallons of milk.

## NUMBERS THROUGH 30

KATE. This is the fifteenth day of November.  
This month is not so long as October.

FRANK. November has — days. I can find 15  
on the calendar.

KATE. There are — days more in the month.

FRANK. The month is just half gone.

KATE. We can divide November into three equal  
parts. — days and — days and — days  
are 30 days.

FRANK. Then one third of a month is — days,  
and two thirds are — days.

KATE. The month will soon be two thirds gone.

KATE. Sometimes Uncle Will sells milk to people who live in town.

FRANK. He fills these pint bottles from the gallon measure.

KATE. One gallon measure full of milk will fill — pint bottles.

FRANK. If the gallon measure were just half full it would fill — pint bottles.

KATE.  $\frac{1}{4}$  of a gallon would fill — pint bottles.

FRANK. And  $\frac{1}{8}$  of a gallon would fill — pint bottle.

KATE. Uncle Will got 5 gallons of milk this morning. That will fill — pint bottles.

## NUMBERS THROUGH 40

FRANK. See what Uncle Will sent me for a birthday present — some real scales with weights!

KATE. Now we can weigh things. This weight is marked 16.

FRANK. That means one pound, because there are 16 ounces in one pound.

KATE. Let us weigh something that is just one pound. What can we find?

FRANK. Here is the box of candy that Aunt Alice sent me. I will put it on one side of the scales and the pound weight on the other side.

KATE. The scales balance. It weighs just one pound.

## NUMBERS THROUGH 40

FRANK. This weight says 8. It means 8 ounces.

KATE. That must be one half pound.

FRANK. I know what we can do. We will weigh one half pound of candy and it will be your part of my birthday gift. Here it is.

KATE. Thank you, Frank.

FRANK. Now I will give half of my part to Mother. That will be — ounces. That will be one fourth of a pound.

$$8 \text{ oz.} + 8 \text{ oz.} = ? \text{ oz.}$$

KATE. Let us play store. I will be the storekeeper and weigh things on the new scales.

FRANK. I will come to buy.

KATE. All right. What can I sell you today?

FRANK. I want half a pound of butter. How much is it?

KATE. Butter is 40 cents a pound now.  $\frac{1}{2}$  of a pound will cost — cents.

FRANK. Then I want half a gallon of vinegar. How much is that?

KATE. Vinegar is 30 cents a gallon. Half a gallon will cost — cents.

FRANK. I want 40 cents' worth of sugar.

[ 80 ]

## NUMBERS THROUGH 45

KATE. Sugar is 8 cents a pound. I will give you  
—— pounds for 40 cents. Do you want some  
potatoes?

FRANK. Yes, how much are they?

KATE. They are 20 cents a peck.

FRANK. That is too much.

KATE. Well, I will let you have them for 15 cents a  
peck.

FRANK. You may send me half a bushel.

KATE. That will be —— cents.

If a pound of sugar costs 6 cents,

$3\frac{1}{2}$  pounds will cost —— cents.

4 pounds will cost —— cents.

If oranges cost 40 cents a dozen,

6 oranges will cost —— cents.

3 oranges will cost —— cents.

15 oranges will cost —— cents.

[ 81 ]

FRANK. How nice it is that spring has come. Now we can make our garden.

KATE. Yes, I shall make a pansy bed 1 foot long and 1 foot wide.

FRANK. Then it will be square and will contain 1 square foot. I shall make this bed 1 foot wide but 3 feet long. It will contain — square feet.

KATE. Oh, no; make it 3 feet wide. Then it will be square and will contain — square feet.

FRANK. Three feet are 1 yard. It will be 1 yard long and 1 yard wide and contain 1 square yard. In 1 square yard there are — square feet.

## NUMBERS THROUGH 45

**KATE.** Let us make another bed by the hedge.  
Make it 6 feet long and 3 feet wide. It will contain —— square feet.

**FRANK.** It will contain —— square yards.

**KATE.** If we could make a bed 9 feet long and 4 feet wide, it would contain —— square feet.

**FRANK.** That would be —— square yards.

**KATE.** Suppose we make one 8 feet long and 5 feet wide. It will contain —— square feet.

**FRANK.** Let us spade all the space on this side of the walk and then divide it into small beds.

**KATE.** I will measure the space. It is 9 feet long and 5 feet wide.

**FRANK.** Then we shall spade —— square feet.

**KATE.** That will be —— square yards.

MOTHER. This picture is very pretty. Let me show you how to mount it.

KATE. I have a cardboard here that is 8 inches long and 6 inches wide.

MOTHER. That will be just right. I will measure 1 inch from the corner on the short side and draw a line parallel with the long side. I have made an oblong 6 inches long and 1 inch wide. It contains 6 square inches.

FRANK. You have made a big oblong, too. It is 6 inches long and 5 inches wide. It contains — square inches.

MOTHER. I will draw a line 1 inch from the opposite side. These two narrow oblongs contain — square inches.

[ 90 ]

## NUMBERS THROUGH 48

KATE. You have left an oblong in the middle. It is 8 inches long and 4 inches wide. It contains — square inches.

MOTHER. I will measure 1 inch from the corner on the long side and draw a line parallel with the short side. I have made 2 one inch squares and an oblong 4 inches long and 1 inch wide. The oblong contains — square inches.

KATE. You still have left a large oblong. It is 7 inches long and 4 inches wide. It contains — square inches.

MOTHER. I draw a line an inch from the other short side. I now have 4 one inch squares and 5 oblongs.

KATE. The oblong in the middle is 6 inches long and 4 inches wide. It contains — square inches.

MOTHER. The 4 squares in the corners together contain — square inches.

KATE. The 4 narrow oblongs together contain — square inches.

## NUMBERS THROUGH 48

FRANK. The 4 narrow oblongs and the 4 squares together contain —— square inches.

MOTHER. We will mount this picture on the middle oblong. It just covers it. It covers —— square inches of surface.

FRANK. It leaves a border of —— square inches.

KATE. The cardboard itself contains —— square inches.

Draw an oblong 4 inches long and 3 inches wide. How many square inches does it contain?

Divide it into 2 equal parts. How many square inches are there in each part?

Draw an oblong 5 inches long and 4 inches wide. How many square inches does it contain?

Divide it into two equal parts. How many square inches are there in each?

Divide each half into 2 equal parts. How many square inches are there in each of these parts? Each of these parts is what part of the oblong?

## NUMBERS THROUGH 50

FRANK. Mother says that we may open our banks and count our money.

KATE. I think you have more than I have. I have a quarter and two nickels and three cents. I have — cents.

FRANK. I have three dimes and two nickels and four cents. I have — cents.

KATE. I should have forty cents if I had — cents more.

FRANK. I should have fifty cents if I had — cents more.

KATE. I am going to take ten cents to buy a little bed for my doll. Ten cents taken from thirty-eight cents leaves — cents.

## NUMBERS THROUGH 50

FRANK. I want a new top. I can get a good one for ten cents. If I take ten cents from forty-four cents I shall have —— cents left.

4 nickels and 4 cents are —— cents.

6 nickels and 9 cents are —— cents.

2 dimes and 2 nickels are —— cents.

3 dimes and 6 cents are —— cents.

4 dimes and 9 cents are —— cents.

1 quarter and 1 nickel are —— cents.

1 quarter and 3 nickels are —— cents.

1 quarter and 2 dimes are —— cents.

1 quarter and 1 dime and 2 cents are —— cents.

3 dimes and 2 nickels and 1 cent are —— cents.

2 dimes and 3 nickels and 3 cents are —— cents.

4 dimes and 1 nickel and 4 cents are —— cents.

$$50 - 10 =$$

$$16 + 4 + 10 =$$

$$50 - 20 =$$

$$23 + 10 + 3 =$$

$$50 - 40 =$$

$$32 + 5 + 5 =$$

$$50 - 5 =$$

$$30 + 9 + 10 =$$

$$50 - 15 =$$

$$25 + 5 + 10 =$$

$$50 - 25 =$$

$$35 + 10 + 5 =$$

## NUMBERS THROUGH 50

FRANK. I have put all of my money back into my bank except one dime.

KATE. I have put all of mine back except ten cents.

FRANK. One dime is the same as ten cents.

KATE. Let us put the cents into 2 equal groups.

FRANK. In each group there will be ——— cents.  
 $\frac{1}{2}$  of a dime is ——— cents.

KATE. Now we will put them into 5 equal groups.  
 In each group there will be ——— cents.

FRANK. Then  $\frac{1}{5}$  of a dime is ——— cents and  $\frac{2}{5}$  of a dime are ——— cents.

KATE. Yes, and  $\frac{3}{5}$  of a dime are ——— cents, and  $\frac{4}{5}$  of a dime are ——— cents.

# NUMBERS THROUGH 50

FRANK. If each cent is by itself, the dime will be divided into ten parts.

KATE. Then each part will be  $\frac{1}{10}$  of a dime.

$$\frac{1}{2} \text{ dime} = ? \text{ c.} \qquad 1\frac{1}{2} \text{ dimes} = ? \text{ c.}$$

$$\frac{1}{5} \text{ dime} = ? \text{ c.} \qquad 2\frac{1}{5} \text{ dimes} = ? \text{ c.}$$

[ 101 ]

FRANK. My birthday is next Saturday and Mother says that I may have a party and may invite 16 children.

KATE. Let us plan what we shall have to eat.

FRANK. I want ice cream.

KATE. Yes. We shall need a gallon. That is — quarts. Mother will make it for us, so we shall not have to buy it.

FRANK. Let us buy some little cakes.

KATE. They are 20 cents a dozen. We shall need  $1\frac{1}{2}$  dozen. That will cost — cents.

FRANK. Everybody likes oranges. Let us have some.

## NUMBERS THROUGH 50

KATE. Oranges are 30 cents a dozen.  $1\frac{1}{2}$  dozen will cost — cents.

FRANK. I want some nuts, too.

KATE. We can get some for 20 cents a pound. Two pounds will cost — cents.

FRANK. We must not forget the candy.

KATE. I like good stick candy. That is 25 cents a pound. Two pounds will cost — cents.

1 pound of candy cost 30 cents.

$\frac{1}{2}$  pound cost — cents.

$1\frac{1}{2}$  pounds cost — cents.

1 dozen bananas cost 20 cents.

$\frac{1}{2}$  dozen bananas cost — cents.

$1\frac{1}{2}$  dozen bananas cost — cents.

1 pound of butter cost 40 cents.

$\frac{1}{2}$  pound cost — cents.

$\frac{1}{2}$  pound cost — cents.

1 pie cost 20 cents.

$\frac{1}{2}$  pie cost — cents.

$\frac{1}{4}$  pie cost — cents.

## NUMBERS THROUGH 52

KATE. Frank, can you add 23 and 22?

FRANK. I don't think I can. That is not very easy.

KATE. I will show you how. Write it on the board,

so:

$$\begin{array}{r} 23 \\ 22 \\ \hline \end{array}$$

3 and 2 are ——. See where I write it?

The numbers in the next column are tens. 2 tens and 2 tens are — tens. I will put the 4 in the tens column. The answer is —.

FRANK. I think I can add now.

KATE. Add 32 and 20.

FRANK. I will write it on the board. 2 and 0 are ——. 3 tens and 2 tens are — tens. The answer is —.

## NUMBERS THROUGH 52

Add:

21	24	15	16	14
<u>21</u>	<u>12</u>	<u>32</u>	<u>23</u>	<u>15</u>

34	28	16	31	25
<u>11</u>	<u>21</u>	<u>32</u>	<u>15</u>	<u>21</u>

12	23	13	24	17
<u>25</u>	<u>13</u>	<u>21</u>	<u>14</u>	<u>22</u>

12	13	12	12	12
<u>12</u>	<u>13</u>	<u>13</u>	<u>15</u>	<u>12</u>

Write number stories about:

24 miles + 15 miles

16 bushels + 22 bushels

15 feet and 23 feet

32 dollars and 10 dollars

20 inches and 30 inches

14 gallons and 21 gallons

[ 105 ]

## NUMBERS THROUGH 52 — TWELFTHS

KATE. I have a strip of paper here that is just one foot long.

FRANK. Then it is — inches long.

KATE. If I fold it into two equal parts, each part will be — inches long. One half of a foot is — inches.

FRANK. Fold it into three equal parts.

KATE. Then each part will be — inches long.

FRANK. One third of a foot is — inches. Two thirds of a foot are — inches.

KATE. Now I am going to fold it into four parts. Each part is now — inches long.

## NUMBERS THROUGH 52

FRANK. One fourth of a foot is — inches. Two fourths are — inches, and three fourths are — inches.

KATE. Two fourths of a foot is just the same as — of a foot.

$$6 \text{ in.} + 6 \text{ in.} = ? \text{ in.}$$

$$2 \times 6 \text{ in.} = ? \text{ in.}$$

Here are some number stories:

Kate used an ounce of coffee to make 2 cups of coffee. How many cups could she make from a pound of coffee?

Frank wished to make a frame for a picture that was 2 feet long and  $1\frac{1}{2}$  feet wide. How many feet was it around the picture? If he allowed one foot extra for the corners, what did the molding cost him at 6 cents a foot?

Frank and his cousin picked the cherries on one of Uncle Will's trees in 27 minutes. How long would it have taken 1 boy to do it alone?

Kate has in her bank 1 quarter, 2 dimes, a nickel, and 3 cents. How much money has she?

## NUMBERS THROUGH 54

One of Uncle Will's cows eats 2 quarts of meal a day. How long will it take her to eat 3 pecks?

If corn grows 2 inches in a day, how many inches will it grow in 1 week? How many inches will it grow in 3 weeks?

Frank had 50 cents. He spent  $\frac{2}{5}$  of it for a new book. How much did the book cost? How much money did Frank have left?

Uncle Will put 12 gallons of cider in a barrel. He took out  $3\frac{1}{2}$  gallons. How many gallons remained?

He sold 1 gallon of cider for 10 cents a quart. How much money did he receive?

Frank's father divided 50 cents equally between the two children. How much did each receive?

Uncle Will's wife bought 5 yards of gingham at 10 cents a yard. She paid for it with eggs at 20 cents a dozen. How many dozen eggs did she give?

There were  $8\frac{1}{2}$  bushels of potatoes in a bin. Frank took out 3 pecks. How many pecks remained?

Here are some number stories about Uncle Will's farm:

Uncle Will has a fine orchard. There are 20 peach trees, 12 pear trees, and 26 apple trees. How many trees are in the orchard?

He has 55 sheep. 42 of them are white. How many black sheep has he?

Kate and Frank set 3 hens. One hen hatched 12 chicks, one hatched 11, and one hatched 15. How many little chickens were hatched?

Uncle Will raised 48 bushels of corn on one acre of ground. He put it into 2 bins. If he put 22 bushels into one bin, how much did he put into the other?

## NUMBERS THROUGH 58

Frank and Kate counted the little pigs. There were 14 in one pen, 20 in another, and 15 in another. How many little pigs were there?

Uncle Will picked 48 bushels of apples. He sold 32 bushels. How many bushels did he keep?

Uncle Will sent Kate's mother 3 turkeys. One weighed 12 pounds, one 14 pounds, and one 11 pounds. How much did they all weigh?

Add 25 to each of these numbers:

24      14      33      22      32      21

Add 14 to each of these numbers:

42      33      34      24      23      35

Add 22 to each of these numbers:

36      34      35      31      25      32

Subtract 20 from each of these numbers:

58      56      52      54      49      47

Subtract 24 from each of these numbers:

58      48      38      57      47      55

## NUMBERS THROUGH 60

KATE. O Frank, see my pretty little clock! It strikes every hour.

FRANK. Do you know how many minutes in an hour?

KATE. Of course! I knew that a year ago. There are 60 minutes in an hour. I can dress in  $\frac{1}{2}$  hour. That is — minutes.

FRANK. I played ball last evening for  $\frac{1}{4}$  of an hour. That was — minutes.

KATE. I practised my music lesson for  $\frac{3}{4}$  of an hour. That was — minutes.

FRANK. It will take the minute hand of the clock 20 minutes to go from the figure 12 to the figure 4.

## NUMBERS THROUGH 60

KATE. It will take it — minutes to go from the figure 4 to the figure 8.

FRANK. It will take it 20 minutes to go from the figure 8 to the figure —.  $\frac{1}{8}$  of an hour is — minutes.

KATE. There are 12 five-minute spaces on the face of the clock. — minutes are  $\frac{1}{2}$  of an hour.

FRANK.  $\frac{5}{12}$  of an hour will be — minutes, and  $\frac{7}{12}$  of an hour will be — minutes.  $\frac{6}{12}$  of an hour is the same as — of an hour.

$$1 \text{ hr.} = ? \text{ min.}$$

$$30 \text{ min.} = ? \text{ hr.}$$

$$\frac{1}{2} \text{ hr.} = ? \text{ min.}$$

$$15 \text{ min.} = ? \text{ hr.}$$

$$\frac{1}{4} \text{ hr.} = ? \text{ min.}$$

$$45 \text{ min.} = ? \text{ hr.}$$

$$\frac{3}{4} \text{ hr.} = ? \text{ min.}$$

$$\frac{1}{8} \text{ hr.} = ? \text{ min.}$$

$$5 \text{ min.} = ? \text{ hr.}$$

$$\frac{1}{12} \text{ hr.} = ? \text{ min.}$$

$$35 \text{ min.} = ? \text{ hr.}$$

Write number stories about:

$$\frac{1}{2} \text{ hour} + \frac{1}{4} \text{ hour}$$

$$\frac{1}{2} \text{ hour} - 10 \text{ minutes}$$

$$\frac{3}{4} \text{ hour} + 10 \text{ minutes}$$

$$1 \text{ hour} - 20 \text{ minutes}$$

$$1 \text{ hour} - \frac{3}{4} \text{ hour}$$

$$\frac{3}{4} \text{ hour} - \frac{1}{2} \text{ hour}$$

## NUMBERS THROUGH 60

Frank and Kate made a clock out of stiff paper. They put on the hands with pins. Then they played "What time is it?"

Where did Frank put the minute hand to show 15 minutes after 9? 10 minutes after 9? Half past nine? A quarter to ten?

Where did Kate put the hands to show that it was 3 o'clock? 5 minutes after 3? 20 minutes after 3? 25 minutes to 4? 5 minutes to 4?

Can you tell the time on each of these clocks?

## NUMBERS THROUGH 60

Make a clock face and show the time for each of these number stories:

Frank got up at 10 minutes after 7. He was ready for breakfast in 20 minutes. What time was it?

He finished breakfast at 8 o'clock and worked in his garden 25 minutes. What time was it?

He started for school at half past 8. It took him 15 minutes to walk to school. What time did he reach there?

School began at 9 o'clock. The children sang for 20 minutes. What time was it then?

Then Frank studied his reading lesson for 15 minutes. Show what time it was when he finished.

The children went out for recess at half past 10. They played for 15 minutes. What time was it?

At 11 o'clock Frank began writing some number stories. He worked for 15 minutes. Show what time it was.

Show what time the children went home for lunch. They came back one hour later. What time was it?

Tables of tens, elevens, and twelves:

$10 \times 1 = 10$	$11 \times 1 = 11$	$12 \times 1 = 12$
$10 \times 2 = 20$	$11 \times 2 = 22$	$12 \times 2 = 24$
$10 \times 3 = 30$	$11 \times 3 = 33$	$12 \times 3 = 36$
$10 \times 4 = 40$	$11 \times 4 = 44$	$12 \times 4 = 48$
$10 \times 5 = 50$	$11 \times 5 = 55$	$12 \times 5 = 60$
$10 \times 6 = 60$	$11 \times 6 = 66$	$12 \times 6 = 72$
$10 \times 7 = 70$	$11 \times 7 = 77$	$12 \times 7 = 84$
$10 \times 8 = 80$	$11 \times 8 = 88$	$12 \times 8 = 96$
$10 \times 9 = 90$	$11 \times 9 = 99$	$12 \times 9 = 108$
$10 \times 10 = 100$	$11 \times 10 = 110$	$12 \times 10 = 120$
$10 \times 11 = 110$	$11 \times 11 = 121$	$12 \times 11 = 132$
$10 \times 12 = 120$	$11 \times 12 = 132$	$12 \times 12 = 144$
